New York City | (408) 914-1875 | joshua.guevara124@gmail.com | [Github](#) | [Linkedin](#) | [Website](#)

Full-stack software engineer with a focus on frontend development and 4 years of experience building production web applications with TypeScript, React, Vue.js, Node.js, and .NET. Experienced in owning features end-to-end, from intuitive user interfaces to the APIs and distributed services behind them.

SKILLS

Languages: TypeScript, C#, Python, Java, SQL

Frameworks & Runtimes: React, Vue.js, Node.js, ASP.NET Core, Babylon.js

APIs & Data: GraphQL, PostgreSQL

DevOps & Tools: Docker, Kubernetes, Helm, GitLab CI, Git, Selenium

EXPERIENCE

Software Engineer

Dec. 2023 - Present

Beast Code

- Delivered an MVP dashboard for sailors to monitor system faults and visualize affected hardware, integrating a Vue frontend with a .NET backend and existing DoD fault-management systems
- Owned end-to-end development of a 3D fault visualization system, transforming fault data into component-specific responses that highlighted affected hardware
- Built and integrated a .NET notification service within a distributed system, exposing APIs that translated incoming requests into GraphQL queries and mapped responses between system data contracts
- Cut initial load times by 20% by resolving network bottlenecks and refactoring API request patterns
- Adapted APIs and data contracts to evolving requirements from teams managing the fault system, maintaining compatibility across system boundaries

Software Engineer

Oct. 2022 - Dec. 2023

Hurricane Electric

- Led design, development, and deployment of an internal platform for validating the company's proprietary mathematical engine against established computational tools
- Built a Node.js API to pull data concurrently from multiple services via Selenium and REST integrations, cutting validation turnaround from hours to minutes
- Developed a React-based frontend enabling users to submit mathematical functions and compare visual outputs across all services side-by-side in real time

PROJECTS

On Deck — *Full-Stack Mobile/Web App*

- Built a full-stack React Native/Express/PostgreSQL app through agentic coding with Claude Code, using prompt engineering to direct architecture decisions, guide implementation, and review generated code
- Developed an AI-driven event ingestion pipeline using a tiered approach from structured iCal/HTML sources to LLM/Vision processing, automating discovery of local performance opportunities

EDUCATION

San Jose State University

B.S. in Applied Computational Mathematics, Minor in Computer Science

Aug. 2018 - May 2022
